

# Consent as Play

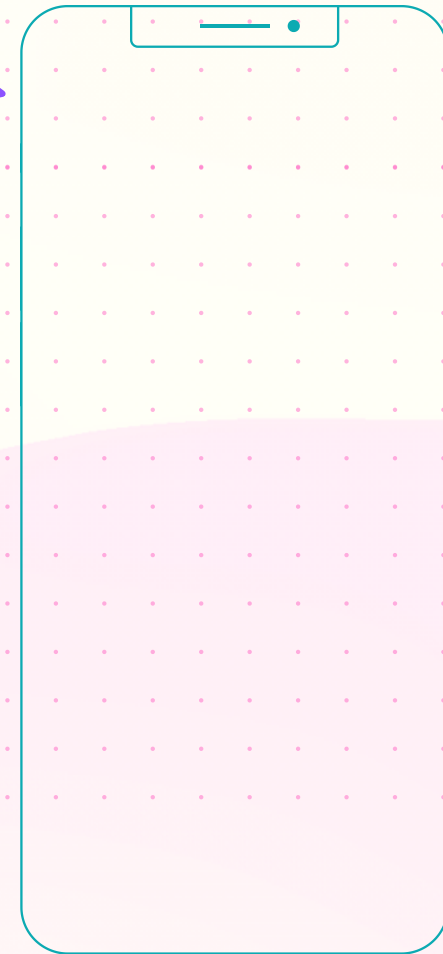

## Activity :

The standard consent architecture cause information overload. Use the screens below to design a more playful, engaging and attention-seeking consent flow.

*Create a terms and conditions interface (could be video/audio) which your user simply cannot scroll past. Use gamification to make consent more engaging and easy for your users*

## Activity :

Design icons/ badges that can be used across app screens which inform the user what permissions are active at each level and allows them to turn off the permissions using the icons.

A sample badge showing camera settings on/ off

## Activity :

Design widgets for your home screen to track default permission activity. These widgets can show all critical permissions which are active and which apps are using it..
